

# EXHIBIT B

This data is from an experiment examining the ability of anti-PDGF IgG to neutralize the chemotactic activity present in the Anti-PDGF IgG purified fraction (PDGF related) of human wound fluids collected on various days (D1 = Day 1, D2 = Day 2, etc.) As seen in the column to the far right only day 1 shows significantly high activity which is neutralizable with the anti-PDGF IgG. ie sample 1 is Day 1 in the presence of non-immune IgG 157; sample 2 is the same material in the presence of anti-PDGF IgG 28. Sample 19 is a 10 ng/ml PDGF standard in the presence of non-immune IgG 167; sample 20 is the same material in the presence of anti-PDGF IgG 40. Therefore samples below with activity below 28-40 have little or no PDGF like activity.

				ABS	Activity, $\mu$ m
1	D1	IgG	31	249	157
2	"	$\alpha$ PDGF	31	124	28
3	D2	IgG	33	125	29
4	"	$\alpha$ PDGF	17	108	12
5	D3	IgG	10	126	30
6	"	$\alpha$ PDGF	89	76	-
7	D4	G	1	86	-
8	"	P	60	45	-
9	D5	G	66	99	3
10	"	P	9	48	-
11	D6	G	11	105	9
12	"	P	78	76	-
13	D7	G	35	108	22
14	"	P	21	110	14
15	D8	G	97	123	27
16	"	P	68	107	11
17	D9	G	44	103	7
18	"	P	93	93	-
19	PDGF	10 ng/ml IgG	82	265	167
20	"	$\alpha$ PDGF	84	136	40
21	"	5 ng/ml IgG	15	197	101
22	"	$\alpha$ PDGF	78	104	8
23	"	P IgG	28	92	-
